**Violam high-pressure decorative laminates.
A brand that represents craftsmanship
of the highest order. Born when vision met skill,
and science met art, it understands the fine art
of making a masterpiece.**

An ISO 9001 certified company, Violam is a part of
a house of high pressure decorative laminates with an
experience of more than two decades. With exports to
over 60 countries from India,

it has been awarded the prestigious CE Marking
in quality and efficiency.

A comprehensive range of designs, textures and decors
created by state-of-the-art machines makes
Violam laminates the first choice of architects, interior
decorators and designers.

Violam decorative laminates are available in five
different sizes to fit your varying needs.

Textures *& reimagined.*

Here's an interesting human insight. A thing of beauty is a must-touch. (Remember the 'do not touch' boards at painting exhibitions?) Piggy-backing on this curious aspect in all of us is our range of laminates with textures ranging from coarse to smooth, wood to metal and warm to cold. Of course, they're good looking too.

Lumber

The different shades of lumber just makes your surrounding little more dynamic.
The blend of class and rawness, keeps the admirers intrigued.

AVAILABILITY

- Unless mentioned otherwise, the designs would be available in suede finish and a standard size of 1220 mm × 2440 mm (4' X 8')
- Upon special request and after confirmation from our factory, other finishes, namely matte and gloss, can be made available.
- The '*' symbol is meant for designs that are also available in the size of 1300 mm × 3050 mm.
- Violam Laminates are also available in post-forming format.
- We recommend metal laminates only for vertical application.
- The thickness of our laminates for the domestic market are 1.0 mm and 1.5 mm. For the export market, the thickness varies with requirement.

DIRECTIONS FOR USE

- Before bonding, always ensure that you level the surface and free it from oil, moisture, grease, dust and other contaminants.
- Use Violam adhesive for better bonding. Stir it well before use.
- The bond will become weaker if you add water to any adhesive.
- Do not cut at 90° angle to avoid cracks. And round off corners after fixing the laminate.
- Once tackiness is achieved (it may take 20-40 minutes, depending on the prevalent atmospheric conditions on the site), the laminate should be placed on the surface, accurately aligned and pressed down firmly to ensure proper bonding.
- During alignment and pressing, no air gap or air bubbles should remain between the surface and the laminate.
- Keep the pasted portion under sufficient pressure for a period of 6 to 12 hours, for proper bonding. The rate of drying may vary according to the surface and atmosphere.
- Use soft soap solution for cleaning.
